

## ABOUT

Founding Engineer building production AI systems where regulated workflows, client money and audit trails leave no room for improvisation. Bridges technical complexity and business clarity across global teams.

## TECH STACK

### Next.js · TypeScript

Product Engineering

### Supabase · Cloudflare

Data, RLS & Edge Deploy

### Claude Code

AI Development

### Bubble.io

Certified Expert

### Lovable · Figma Make

Prototyping & Design

## COMPETENCIES

AI Product Engineering

Product Architecture

Spec-Driven Delivery

Multi-Tenant SaaS

AI & API Orchestration

Database Architecture

UI/UX Design

Operations Management

Stakeholder Alignment

## LANGUAGES

### Portuguese

Native

### English

Bilingual / Fluent

## EDUCATION

### University of Debrecen

Master's, Engineering Management  
Sep 2019 – Jun 2021

### Univ. Federal de Viçosa

Bachelor's, Production Engineering  
Aug 2010 – Jan 2017

### Arizona State University

Industrial Engineering Exchange  
Aug – Dec 2014

### Rutgers University

American Language Studies (PALS-NB)  
Aug 2013 – May 2014

# Douglas Gouveia

Founding Engineer · AI Product Engineer · Senior Certified Bubble Developer

## PROFESSIONAL SUMMARY

Founding Engineer at Move37, a lean AI-native agency, shipping production AI systems end-to-end: regulated financial workflows, source-verified recommendation engines and multi-tenant content operations. Builds on Next.js and TypeScript over Supabase with row-level security, deployed on Cloudflare Workers, with multi-model AI orchestration behind a single gateway. Certified Senior Bubble Developer with a Master's in Engineering Management — Production Engineering rigor at AI velocity, spec-driven from architecture to acceptance criteria.

## PROFESSIONAL EXPERIENCE

### Founding Engineer

**Move37** **REMOTE**

Jun 2026 – Present

- Build production AI platforms where AI meets real operational risk: regulated financial workflows, source-verified recommendation engines, multi-tenant content operations, and the internal systems running agency projects, billing and client delivery.
- **Architecture pattern:** AI does the repetitive reasoning at scale, humans keep the judgment, and every action leaves an audit trail.
- **Stack:** Next.js and TypeScript on Supabase with row-level security, deployed on Cloudflare Workers, with multi-model AI orchestration behind a single gateway.
- **Spec-driven delivery:** architecture, data model and acceptance criteria written before code — systems touching client money or client data don't get to be improvised.

### Senior Bubble Developer & AI Product Engineer

**Freelance / Independent** **REMOTE**

Jan 2022 – Present

- **Complex Backend Architecture:** high-performance database structures and sophisticated API connectors for high-volume data and third-party integrations.
- **Advanced Logic & Workflows:** intricate 'code-like' logic and custom states solving business problems beyond standard templates.
- **Scalability & UI/UX:** optimizing apps from MVP to thousands of active users; bridging Figma design to responsive Bubble elements.

### Operations Manager & Full-Stack AI/No-Code Developer

**Blur Studio** **REMOTE**

Sep 2025 – May 2026

- Led discovery, translating client visions into Project Playbooks, prototypes and task roadmaps.
- Architected the internal 'Company OS' — SOPs, OKRs, talent pools and leads — plus a Project Management System, Feedback Rating System and AI-driven Business Idea Refiner.
- Turned Playbooks into clickable prototypes with Figma Make; deployed scalable apps with Claude Code, Lovable and Bubble.

### Bubble Developer

**Goodspeed** **REMOTE**

Feb 2024 – Sep 2024

- Owned the full Bubble.io stack: frontend design, backend workflows, optimized schemas and third-party API integrations.
- Translated Figma prototypes into technical requirements and managed milestones from wireframing to final QA and deployment.

### Intern · Project Intern

**Bryan Cassady · NTG–UFV · CenTev/UFV**

2011 – 2022

- Built a company scalability and innovation-readiness assessment tool grounded in 10+ years of research; authored 8 Technological Plan worksheets and a technical, economic and environmental feasibility study that guided executive investment decisions.
