Aug – Dec 2014

Rutgers University

American Language Studies (PALS-NB)
Aug 2013 – May 2014

PROFESSIONAL SUMMARY

Turns rough business briefs into working products and automations, using AI as the build engine: Claude Code, Lovable and Bubble for apps and AI workflows. Recent work includes an AI working-papers system for a UK accounting firm and a multi-agent content operations platform. Master's in Engineering Management and 4+ years delivering for founders in Brazil, Finland, the UK and the US, owning the full arc from discovery and spec to build, rollout and adoption.

PROFESSIONAL EXPERIENCE

AI Product Builder

Move37 **REMOTE**

Jun 2026 – Present

- **AI products from brief to production:** an AI working-papers system for a UK accounting firm (Xero and FreeAgent data, reconciliation, journals proposed for partner approval), a multi-agent content operations platform, and a source-verified marketing recommendation tool.
- **Spec-first delivery:** architecture, data model and acceptance criteria written before the build; AI builds against the spec, and every decision stays owned and reviewed.
- **Human in the loop by design:** AI handles the repetitive work at scale, people approve anything touching client money or data, and every action leaves an audit trail.
- **Stack:** Next.js and TypeScript on Supabase with row-level security, built with Claude Code and deployed on Cloudflare Workers; several AI models behind one gateway.

Senior Bubble Developer & AI Product Builder

Freelance / Independent **REMOTE**

Jan 2022 – Present

- **10 products for founders** in Brazil, Finland, the UK and the US: marketplaces, a CRM, subscription and content platforms.
- **Data and integrations:** scalable data models and third-party integrations including Stripe, OpenAI, HubSpot and Salesforce.
- **MVP to scale:** took apps from first version to thousands of active users; turned Figma designs into responsive products.

Operations Manager & Full-Stack AI/No-Code Developer

Blur Studio **REMOTE**

Sep 2025 – May 2026

- Led discovery, translating client visions into Project Playbooks, prototypes and task roadmaps.
- Architected the internal Company OS (SOPs, OKRs, talent pools and leads) plus a Project Management System, Feedback Rating System and AI-driven Business Idea Refiner.
- Turned Playbooks into clickable prototypes with Figma Make; shipped apps with Claude Code, Lovable and Bubble.

Bubble Developer

Goodspeed **REMOTE**

Feb 2024 – Sep 2024

- Sole developer and project manager on client builds: frontend, backend workflows, data schemas and third-party API integrations.
- Translated Figma prototypes into technical requirements and managed milestones from wireframing to final QA and deployment.

Intern · Project Intern

Bryan Cassady · NTG-UFV · CenTev/UFV

2011 – 2022

- Built a company scalability and innovation-readiness assessment tool grounded in 10+ years of research; authored 8 Technological Plan worksheets and a feasibility study that guided executive investment decisions.
